

## **Patient Information**

### **Imidazolidinyl urea**

#### **Your TRUE TEST® indicates that you have a contact allergy to Imidazolidinyl urea.**

Imidazolidinyl urea in contact with your skin may result in dermatitis. Brief or occasional contact may not pose a problem.

Imidazolidinyl urea is a preservative with broad spectrum of application, which is effective against bacteria, fungi and yeasts.

#### **Where is Imidazolidinyl urea found?**

Imidazolidinyl urea is found in cosmetics, shampoos and skin care products. Examples of cosmetic products and toiletries are lotions, creams, moisturizers, emollients, foundations, powders, concealers, bronzers, self-tanners, makeup removers, sunscreens, eye shadows, and mascaras. It is also found in liquid soaps, hair conditioners, gels, bubble baths, baby wipes, and over-the-counter and prescription topical medicines. Other sources of exposure include detergents dishwashing liquids, and cleaning agents.

#### **How to avoid Imidazolidinyl urea**

Avoid cosmetics and other personal care products labeled with imidazolidinyl urea or its synonyms, particularly in stay on products. Rinse off products should involve less risk. It is important to use only ingredient-labeled cosmetics and other skin care products that do not list imidazolidinyl urea or any of its synonyms on the label. Products for household use are not yet labelled. Therefore if there is a suspicion that a household product is causing dermatitis, then the manufacturer will have to be contacted for specific advice. Products that were once tolerated may cause reactions due to change of formulation involving a different preservative. Therefore each new purchase must be checked.

Inform your healthcare providers that you are allergic to imidazolidinyl urea and ask that they use products that are free of this allergen.

If you suspect that you are being exposed to this allergen at work, consult your employer regarding Material Safety Data Sheets.

## **Synonyms/Components of Imidazolidinyl urea**

Imidazolidinyl urea (INCI Name)

Germall 115®

Bis(methylolhydantoin urea) methane

## **Other substances to which you may react**

Some patients sensitive to imidazolidinyl urea are sensitive to formaldehyde and react to formaldehyde and formaldehyde releasing preservatives such as

- Diazolidinyl urea
- Benzylhemiformal
- 2-Bromo-2-nitropropane-1,3-diol (Bronopol®)
- Quarternium-15
- DMDM Hydantoin
- Trimethylolnitromethan
